Chapter 1

Introduction and Motivation

Contents

1.1	Motivation	1
1.2	Problem Statement	2
1.3	Methodology	2
1.4	Contribution	2
1.5	Report Outline	2

1.1 Motivation

The exponential growth of e-commerce has introduced an enormous amount of choice, where consumers face overwhelming product options. To address this challenge, personalized recommendation systems have become essential for enhancing the shopping experience, and increasing the conversion rate for any e-commerce platform.

In contrast to conventional collaborative filtering[1], content-based[1], or popularity-based recommendation systems, our AI-based solution offers distinct advantages. Firstly, AI makes it possible to provide per-user personalized recommendations, which are tailored to their unique preferences and behaviors, enhancing user engagement and satisfaction. AI systems can also intelligently recommend comparable or complementary products or content to increase revenue through cross-selling. Furthermore, AI takes into account the impressions and interactions of users with items, allowing for a more dynamic and accurate understanding of user preferences. Using AI leads to improved recommendation accuracy and relevancy, leading to increased conversion rates and business growth.

Statistics from different use cases of recommendation systems:

- On average, an intelligent recommender system delivers a 22.66% lift in conversions rates [2] for web products.
- IKEA experienced a 30% increase in click-through rate, 2% surge in average order value [3] using Google Recommendations AI [4]
- Lotte Mart increased new product purchases by 1.7x [5] using Amazon Personalize [6]

In summary, our project's motivation is elevating the e-commerce experience, driving business success, and harnessing cutting-edge AI technologies to create a recommendation system that is both high-performing and scalable.

1.2 Problem Statement

1.3 Methodology

1.4 Contribution

1.5 Report Outline

Chapter 2

Background

Contents

2.1	Transformer	3
2.1.1	Model Architecture	3
2.1.2	Scaled Dot-Product Attention	3
2.1.3	Multi-Head Attention	3
2.1.4	Self-Attention and Multi-Head Self-Attention	3
2.1.5	Feed Forward Network	3
2.2	Vision Transformer (ViT)	3
2.3	Lightweight ViT	3

2.1 Transformer

2.1.1 Model Architecture

2.1.2 Scaled Dot-Product Attention

2.1.3 Multi-Head Attention

2.1.4 Self-Attention and Multi-Head Self-Attention

2.1.5 Feed Forward Network

2.2 Vision Transformer (ViT)

2.3 Lightweight ViT

Chapter 3

Literature Review—ViT Acceleration Techniques

Contents

3.1	Pruning	4
3.2	Quantization	4
3.3	Low-Rank Approximation	4
3.4	Knowledge Distillation	4
3.5	Lightweight ViT	4
3.6	Transformer Acceleration on Hardware	4

3.1 Pruning

3.2 Quantization

3.3 Low-Rank Approximation

3.4 Knowledge Distillation

3.5 Lightweight ViT

3.6 Transformer Acceleration on Hardware
